**Principle 1**

**Sustainable fish stocks**
Fisheries must operate in a way that allows fishing to continue indefinitely, without over exploiting the resources.

**Principle 2**

**Minimizing environmental impacts**
Fishing operations need to be managed to maintain the structure, productivity, function and diversity of the ecosystem upon which the fishery depends, including other species and habitats.

**Principle 3**

**Effective management**
All fisheries need to meet all local, national and international laws and have an effective management system in place.
